

Town of Queen Creek Stormwater Management

The Town of Queen Creek's Stormwater Management Plan identifies ways to protect our water resources by focusing on six pollution prevention efforts, known as minimum control measures or MCMs.

MCM 1: Public Education and Outreach

Increase knowledge and change behavior of public so pollutants in stormwater are reduced.

MCM 2: Public Involvement and Participation

Provide opportunities for public to participate in the review and implementation of the Stormwater Management Plan.

MCM 3: Find and Eliminate Pollutant Sources

Find and eliminate sources of pollutants, such as motor oil, fertilizer, pet waste, trash, etc., to prevent them from entering the stormwater system.

MCM 4: Construction Activity Stormwater Runoff Control

Minimize or eliminate pollutant discharge from construction sites (primarily sediment) that disturb one or more acres of land.

MCM 5: Post Construction Stormwater Management in New Development and Redevelopment

Stormwater runoff from new developments should mirror pre-development runoff.

MCM 6: Pollution Prevention and Good Housekeeping for Municipal Facilities and Operations

Implement an Operations & Management Program to prevent pollutant runoff and protect water quality from municipal operations.
